

As.T.R.I. thinks that is extremely important to set up a certification of italian recycling process with admission to practice from enterprises that are involved in recycling.

AS.T.R.I recognizes the leading role of these enterprises, in fact with the admission to practice, the exchange of goods during manufacturing would be simplified. Nowadays the DM 264/13th October 2016 means too much bureaucracy and people who work in textile industry get discouraged.

The keys of our society are sensibility and respect for the environment, safeguarding and giving opportunities to workers. Resources and reuse deserve contributions that allow to certify craft and industrial businesses that are involved in recycling.
